LEARN AND PRACTICE NEW SKILLS IN NEARLY REAL SITUATIONS WITHOUT RISK OF PATIENT INJURY

Learn airway management from intubation to tracheostomy, drainage of peritonsillar abscess, myringotomy with tube insertion, adenoidectomy and basic sinus surgery skills. Assess on-call readiness and management of common ORL emergency scenarios through hands-on experience using high-technology manikins.

With emphasis on experience and practice rather than lectures and formal didactics, learners leave with increased comfort and confidence as they embark on their early careers!
